ConnectBox Supported File Types

Version 4 – Oct 27, 2026. Replaces Version 3 (Oct 7, 2026): old Word (.doc) and PowerPoint (.ppt) files are now shown as web pages too, and NTFS drives hold files over 4 GB.

Every file on the USB drive whose extension is listed below gets a card in the menu. How it opens depends on the type. Anything can be downloaded from its card's detail page; the download button shows the file size first. Files with other extensions are left out of the menus.

Read or played on the ConnectBox (no app needed)

Type	Extensions	How it opens
Video	.mp4 (H.264 video)	Plays in the browser. Videos must be H.264 in MP4 – the older MPEG-4 Part 2 and other codecs do not play; convert them first.
Video	.webm	Plays in most browsers (iPhones only from iOS 15).
Audio	.mp3 .m4a .aac .wav .ogg .opus	Plays in the browser. MP3 works everywhere; .ogg/.opus not on older iPhones.
PDF	.pdf	Built-in PDF reader.
e-Book	.epub	Built-in EPUB reader.
Word	.docx	Shown as a web page (text, headings, lists, tables, pictures, links; not the exact page layout).
Excel	.xlsx .xls	Shown as a web page: one table per sheet, first 2,000 rows of each sheet.
PowerPoint	.pptx	Shown as a web page: one numbered section per slide with its text, pictures, tables and speaker notes (not the slide design).
Old Word	.doc (Word 97–2003)	Shown as a web page: text, headings, bold/italic/underline, lists and tables. Pictures are left out and numbered lists show as bullets. If a PDF with the same name is in the same folder, the PDF is shown and the .doc is download-only.
Old PowerPoint	.ppt (PowerPoint 97–2003)	Shown as a web page like .pptx: slide text with bullet levels and speaker notes. Pictures are left out and tables show one line per cell. If a PDF with the same name is in the same folder, the PDF is shown and the .ppt is download-only.
Pictures	.jpg .jpeg .png .gif .bmp	Shown in the browser.
Text	.txt	Shown in the browser.
Web content	a folder with an index.html page	Opens as a website; a home button leads back to the menu.
Offline websites	.zim	Opens in the built-in Kiwix reader with search (Wikipedia, PhET, TED …).

Download only

These get a card and can be downloaded, but the phone needs its own app to open them.

Type	Extensions
Older Office files that are not converted	.doc .ppt with a same-named PDF in the folder (read the PDF instead); very short .doc files (under about 300 characters), password-protected or damaged files, and PowerPoint 95 or older
Other video	.mov .m4v .mkv .avi .wmv .flv .mpeg .mpg .3gp (some phones can play .mov/.m4v)
Other audio	.m4b .m4p .wma .aiff .alac .aax
Other pictures	.tiff
Interactive content	.h5p
Apps	.apk (Android) .exe .bat .hta .jar .py .php .paf .scpt .sis .sisx .xap
Archives	.zip .gzip .tar (a multi-file folder can also be offered as a zip automatically)

Notes

- Extensions are not case-sensitive (.PDF and .pdf both work).
- Large files: FAT32 drives cannot hold files over 4 GB – use NTFS, exFAT or ext4 for big videos and ZIM files.
- Card pictures are made automatically: a frame from each video, the cover art inside audio files, and the picture itself for images; other types show an icon for their type.
- Not listed, so not shown: .webp, .svg and .avif pictures, .odt/.ods/.odp (LibreOffice) files.
- How content is arranged into menus, collections and languages is described in the mmiLoader USB Content Structure Reference.
